HomeVault

Product overview & module guide: what the website does and how every part works

A household operating system for families

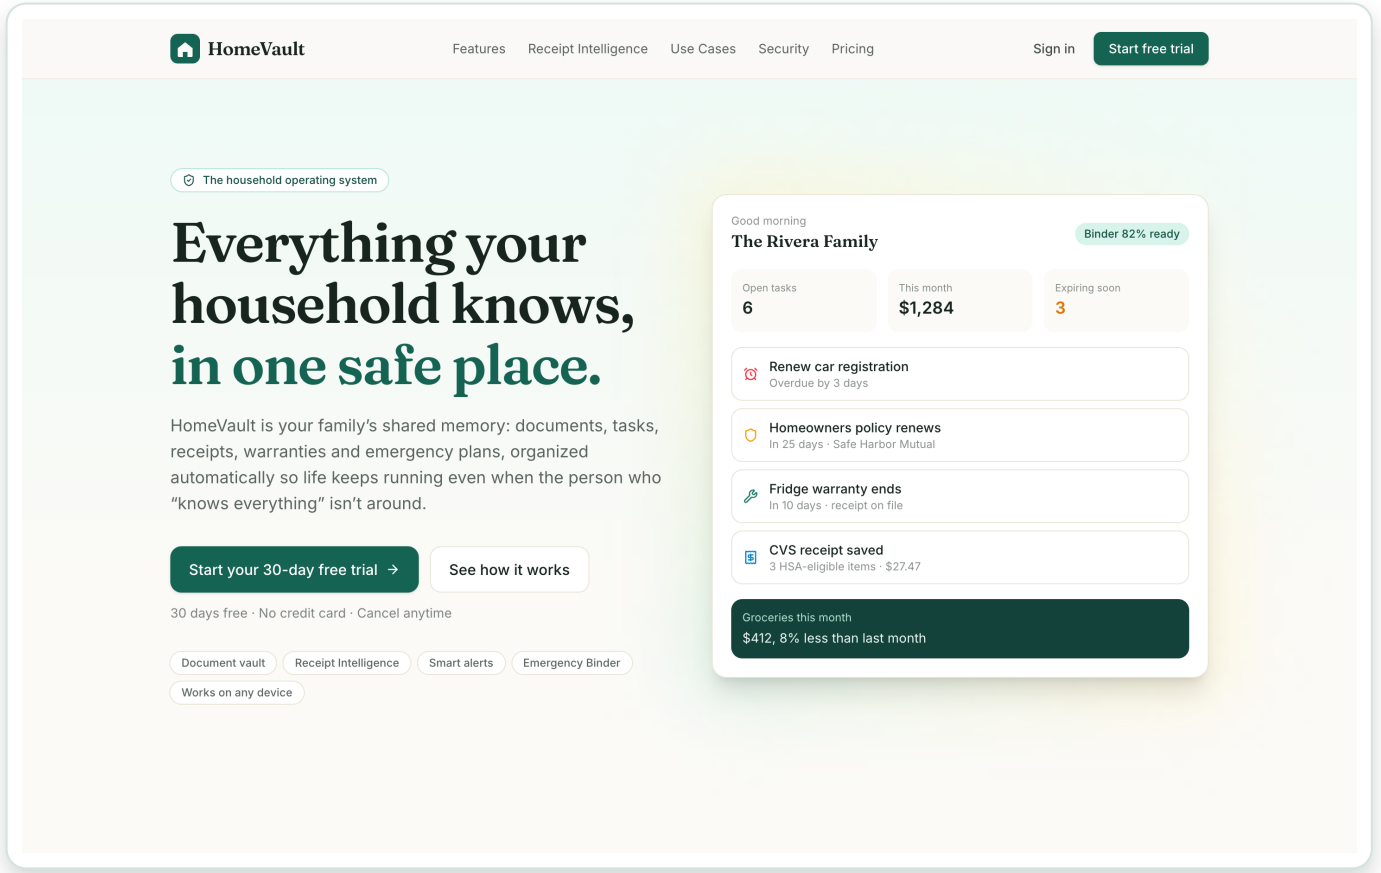

One shared, secure memory for the whole household

The problem

Most homes run on one person’s memory: where the insurance policy is, when a warranty ends, who to call about the furnace. If that person is unavailable, the family is stuck.

The solution

- Documents, tasks, calendar, contacts and receipts in one place
- Alerts before anything expires or falls overdue
- Spending insights from everyday receipts
- An emergency binder anyone can follow

Built for every kind of household

New parents

Pediatrician contacts, insurance changes and baby-gear warranties in one place

Homeowners

Maintenance schedules, appliance warranties, contractors and receipts for claims

Caring for aging parents

Medications, doctors and legal documents shared with siblings

Rental property owners

Leases, repairs, expenses and vendor contacts kept organized

Estate & continuity

An emergency binder, instructions and messages for loved ones

Busy families

Shared calendar, assigned chores and one place to find everything

Twelve modules, one household

Module deep dives

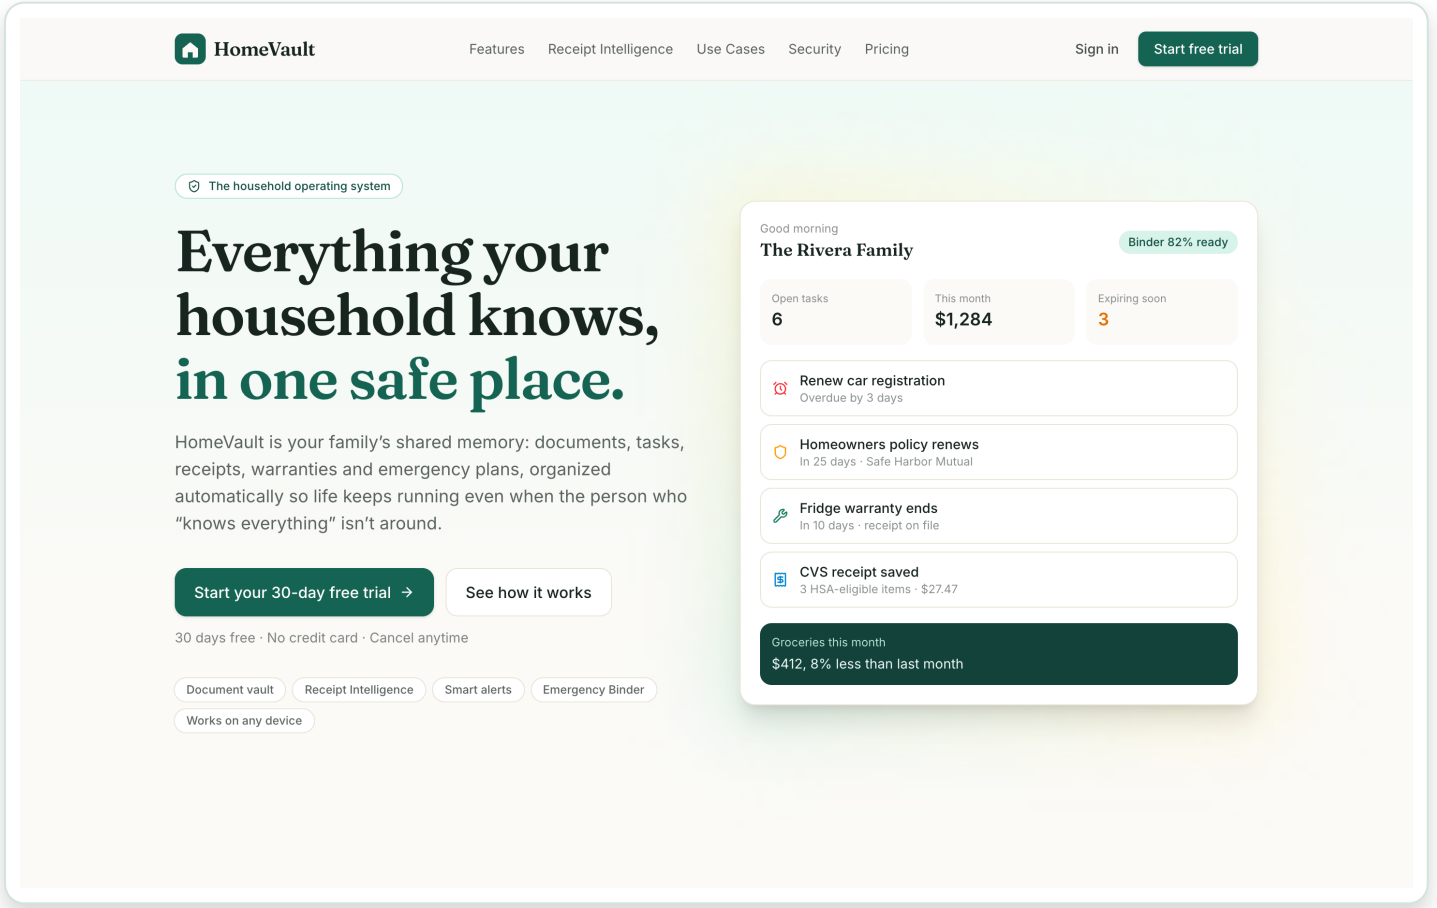

What each module does, its key features and how it works under the hood

Landing page: the public website

The marketing site visitors see first. It explains the product and drives sign-ups.

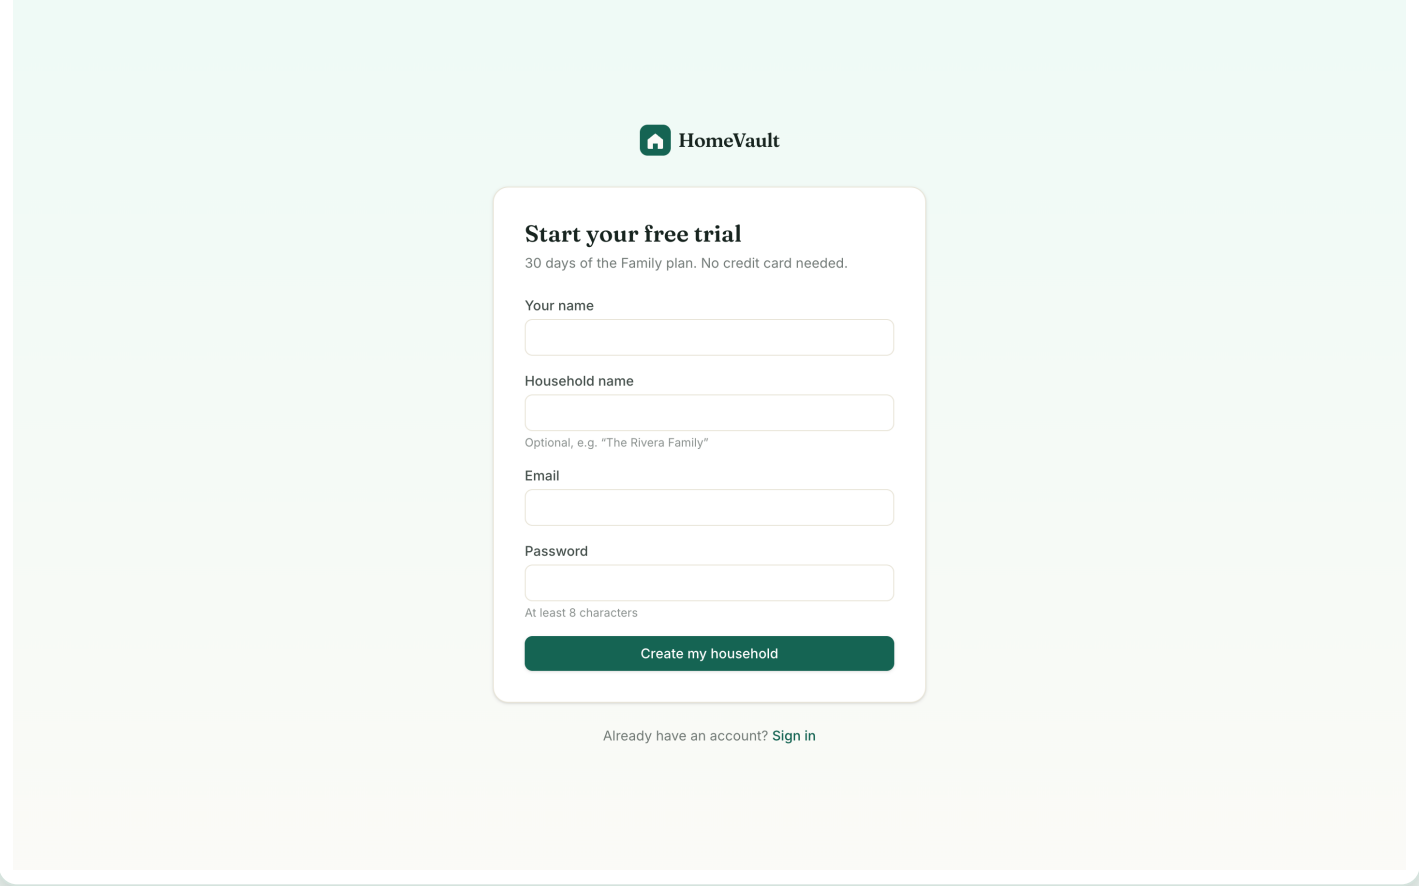

Key features

- Hero with dashboard preview & “Start free trial”
- Problem vs. solution and the mission
- How it works: Capture, Organize, Act
- Use cases, emergency readiness & security
- Four pricing plans with a 30-day trial

Under the hood Statically rendered Next.js page; fully responsive down to phone width.

Accounts, households & roles

Each sign-up creates a household. Everything a family stores belongs to that household.

Key features

- Register creates a household + 30-day Family trial
- Secure login with session tokens
- Roles: Owner, Admin and Member
- Owners/Admins add or remove members
- One-click demo account for testing

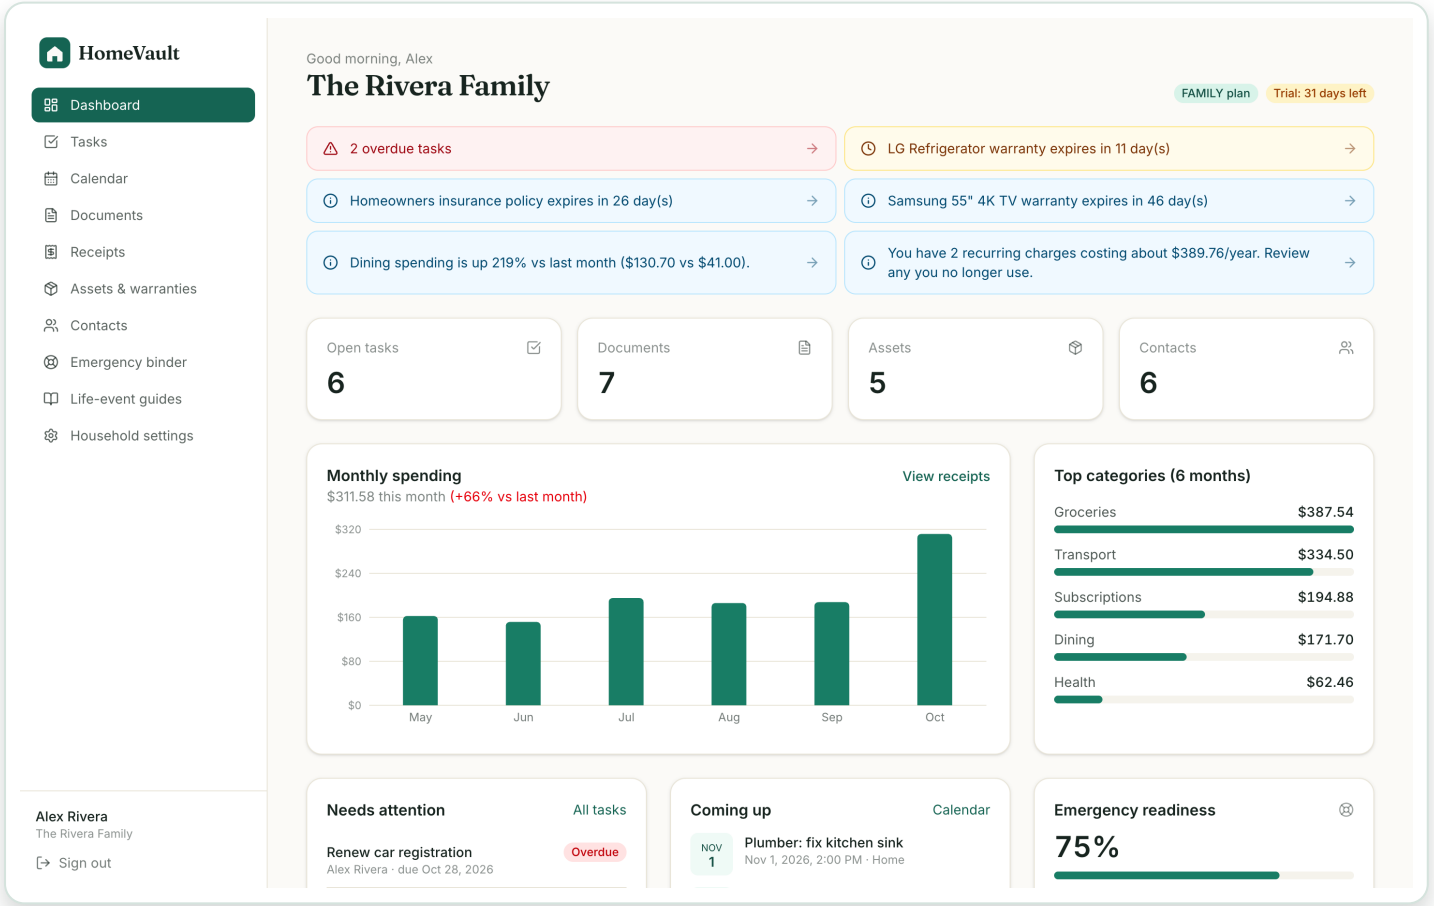

Under the hood Passwords hashed with bcrypt; JWT tokens; every query is filtered by household.

Dashboard: the household at a glance

The home screen after login. It pulls signals from every module into one view.

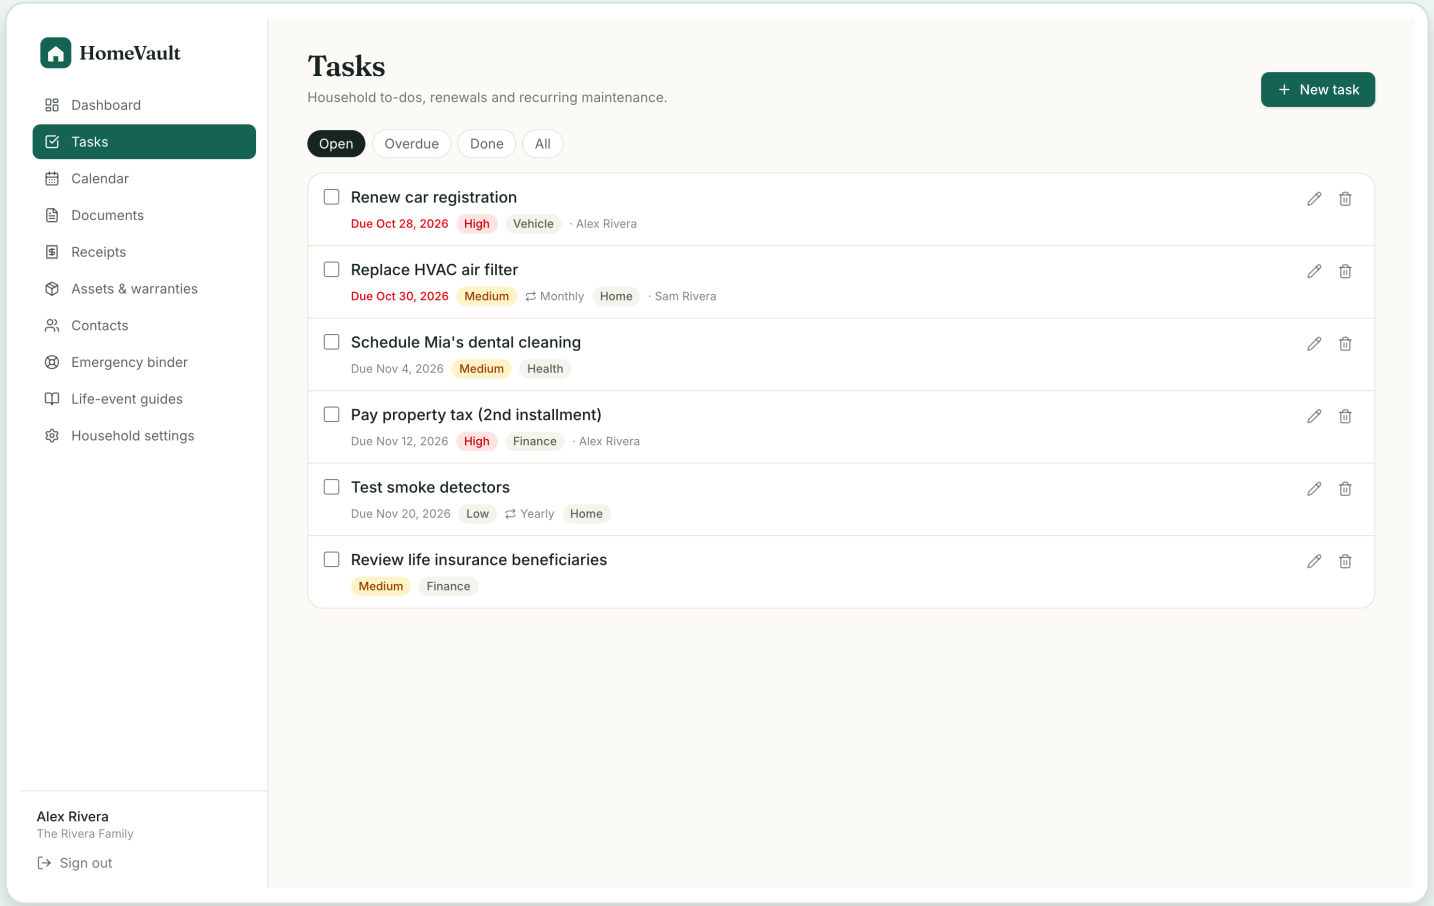

Key features

- Smart alerts: overdue, expiring, spending spikes
- Counts of tasks, documents, assets, contacts
- Six-month spending chart & top categories
- Upcoming tasks and events
- Emergency readiness score & expiring items

Under the hood One API call (GET /dashboard) aggregates tasks, events, documents, assets, receipts and the binder.

Tasks: to-dos, renewals & maintenance

A shared to-do list for the household, built for recurring home admin.

Key features

- Due dates, priority, category and notes
- Assign tasks to any household member
- Repeat weekly, monthly or yearly
- Filters: Open, Overdue, Done, All
- Overdue items highlighted in red

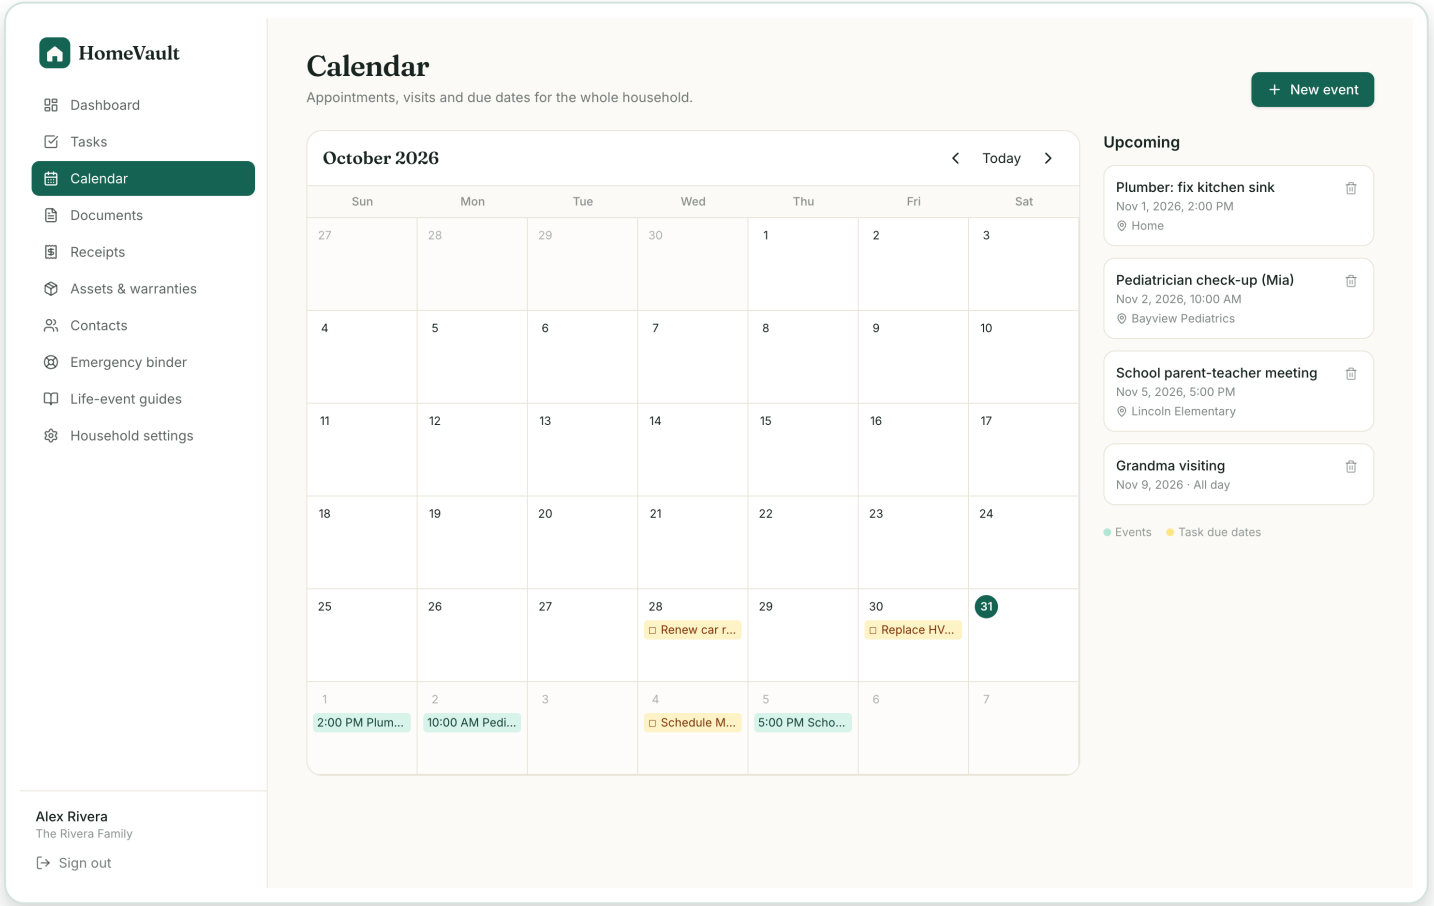

Under the hood Completing a recurring task automatically creates the next occurrence.

Calendar: everything with a date

A month view of appointments, visits and task due dates for the whole family.

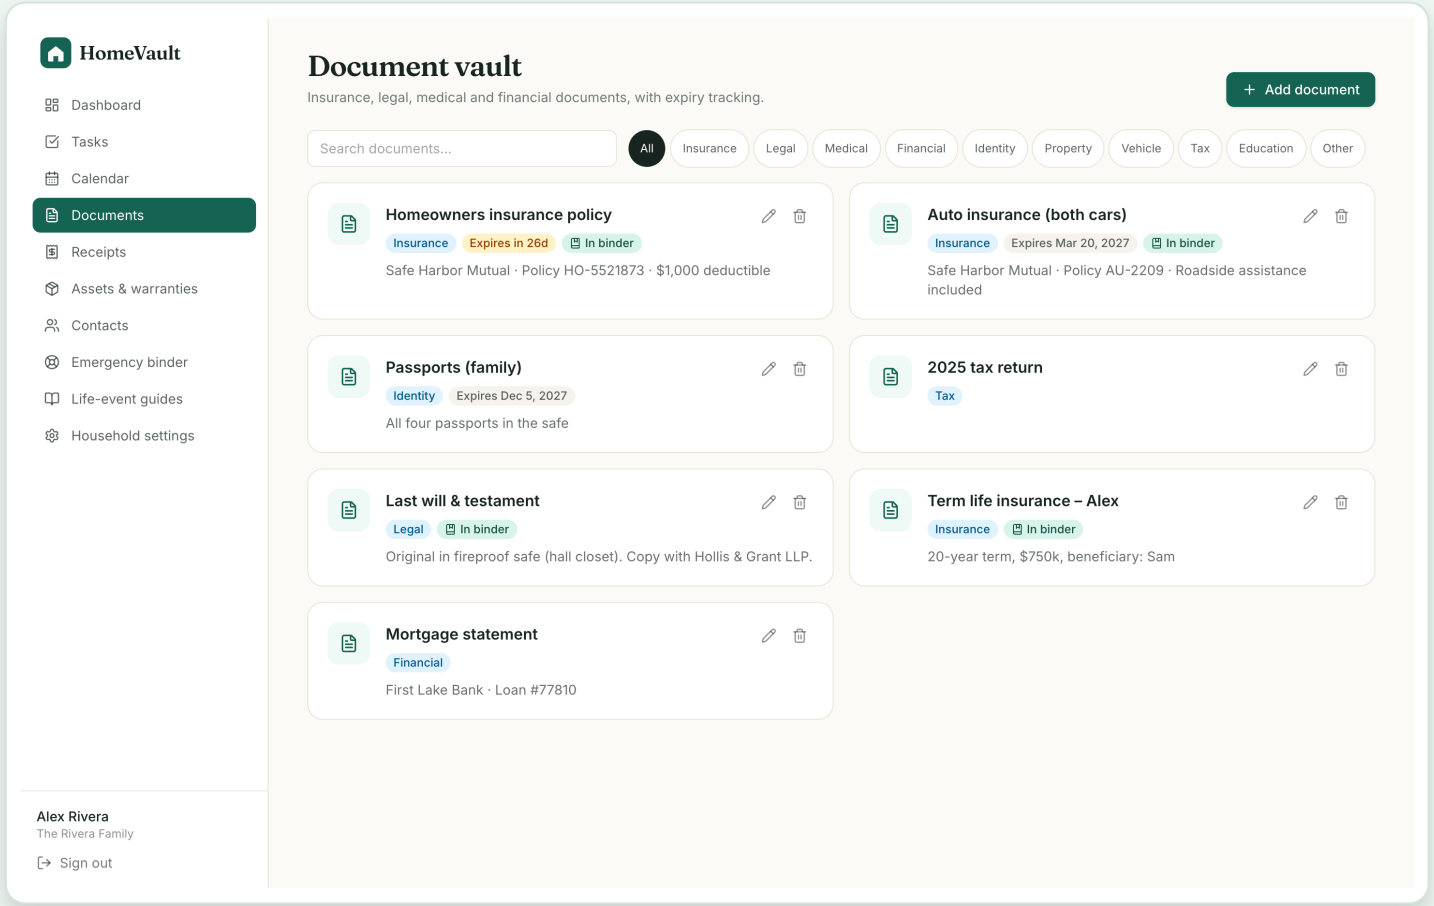

Key features

- Click any day to add an event
- Timed or all-day events with location
- Task due dates shown alongside events
- Upcoming list beside the calendar
- Edit or delete from the calendar

Under the hood Events and tasks are merged client-side by local date, so nothing shifts across time zones.

Document vault

Secure storage for insurance, legal, medical, financial and identity documents.

Key features

- 10 categories with search & filter chips
- Attach PDFs, images or Word files (10 MB)
- Expiry / renewal dates with warning badges
- Key details: policy numbers, where originals are
- “Include in emergency binder” option

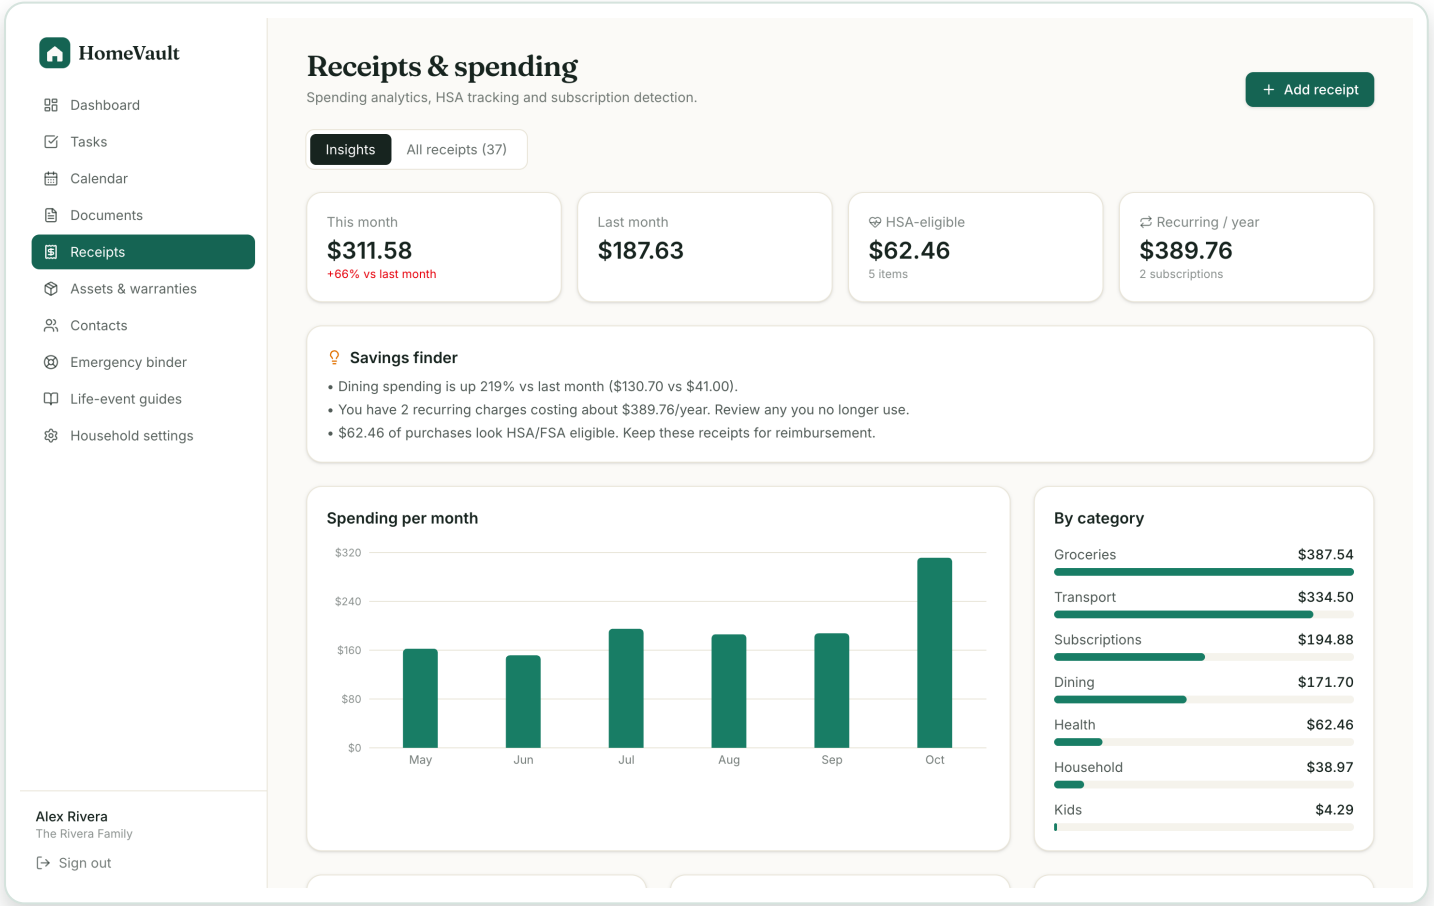

Under the hood Files go to local disk in development and Cloudinary in production.

Receipts & spending insights

Log receipts with line items and turn everyday purchases into spending insight.

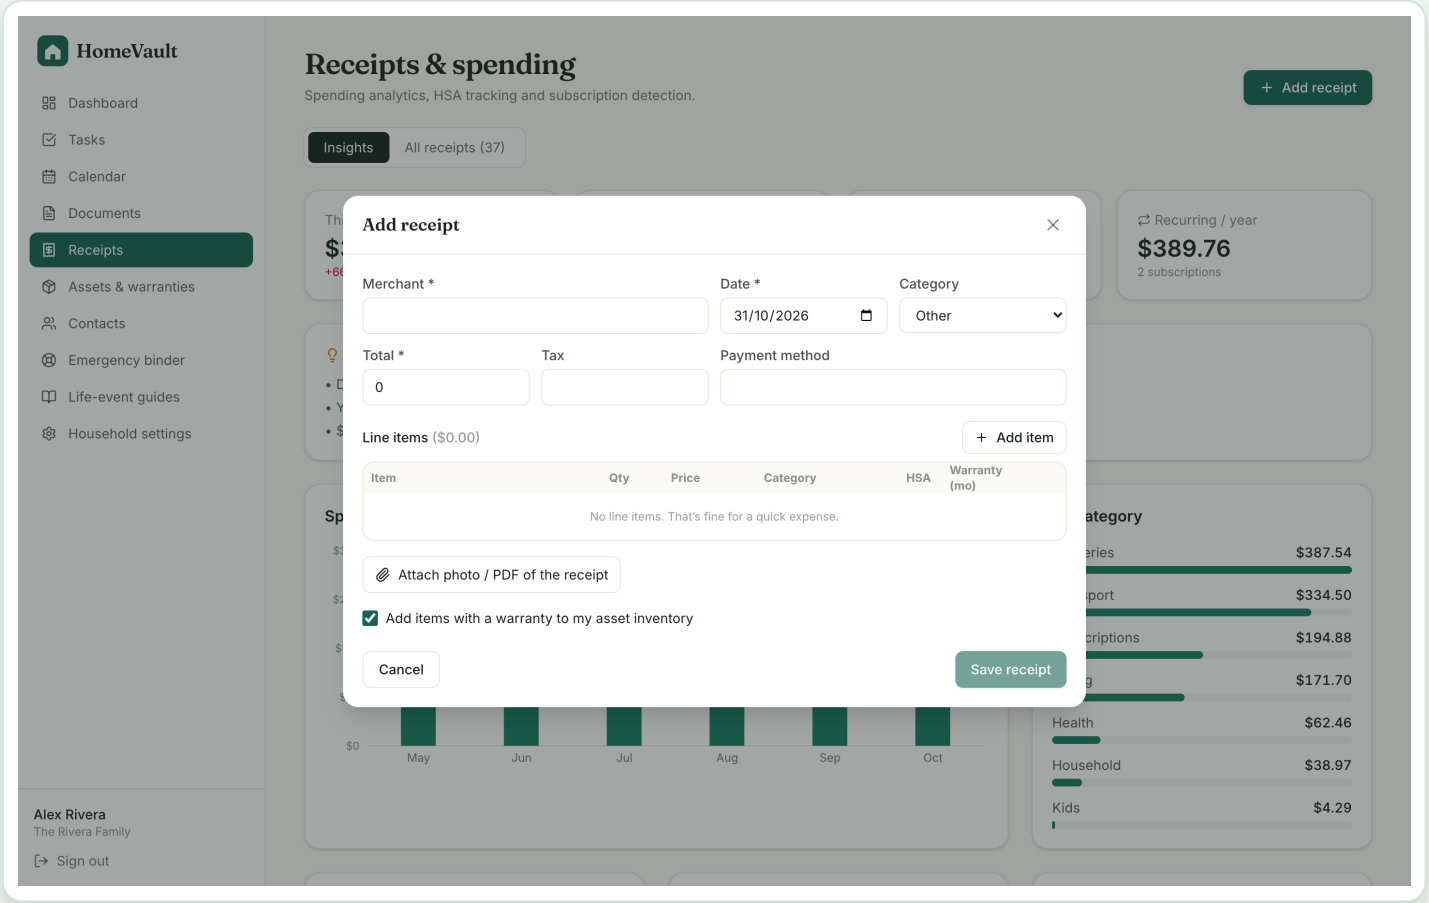

Key features

- Monthly spending chart & category breakdown
- Savings finder: spikes and subscriptions
- HSA/FSA-eligible item tracking
- Top merchants and recurring charges
- Warranty items become assets automatically

Under the hood Analytics are computed by GET /receipts/analytics from line items, by month and category.

Adding a receipt

Receipts are entered by hand in a single form, with an optional photo or PDF.

Key features

- Merchant, date, category, total, tax, payment
- Any number of line items with categories
- Tick HSA-eligible items
- Warranty months per item
- Attach a photo or PDF of the original

Under the hood Saving with “add to inventory” creates assets with calculated warranty end dates.

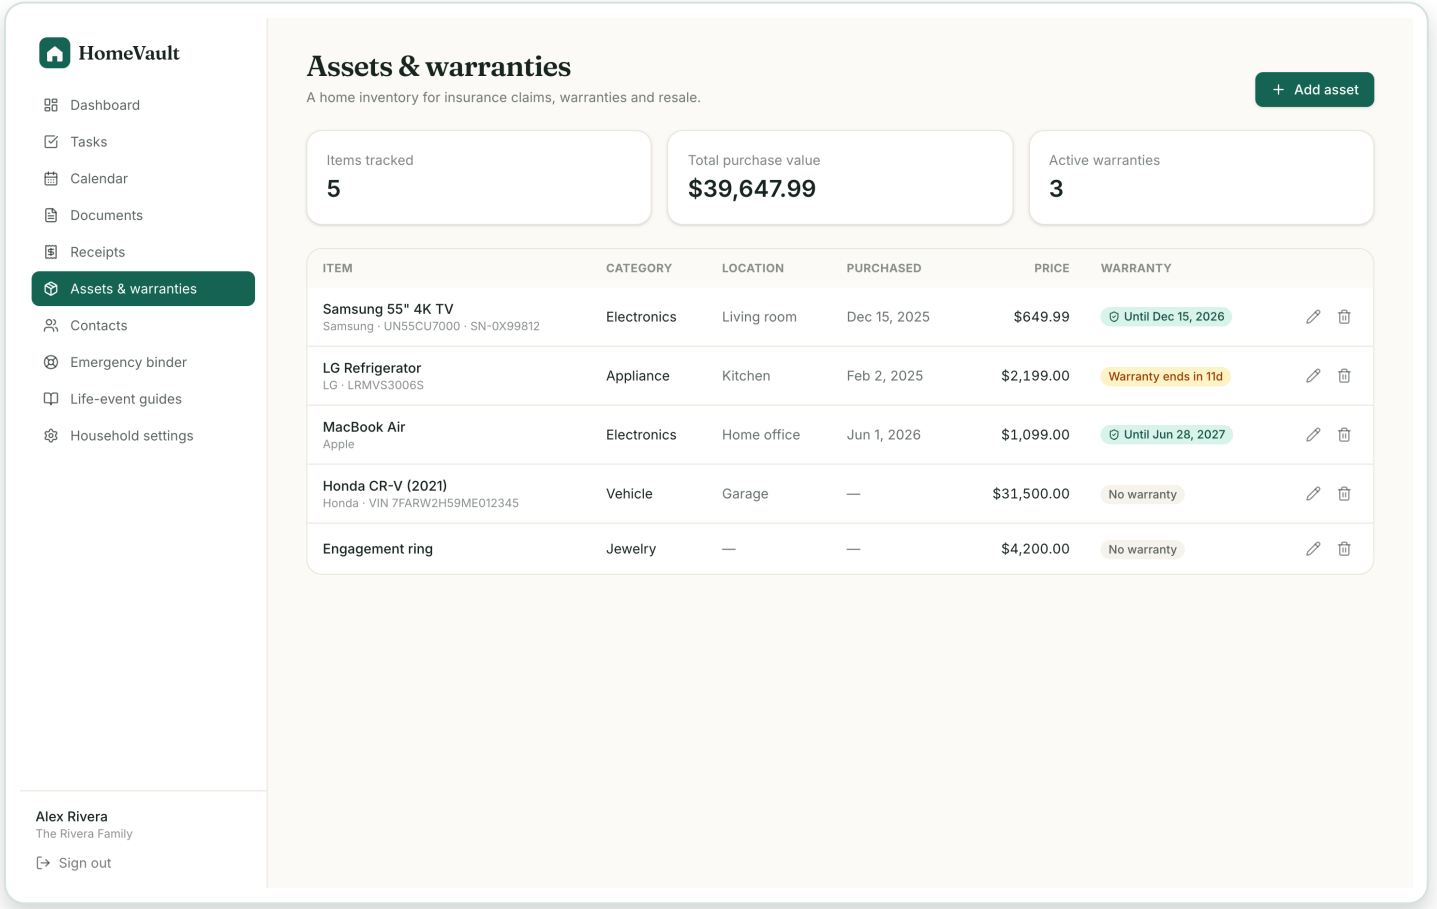

Assets & warranties

A home inventory for insurance claims, warranties and resale.

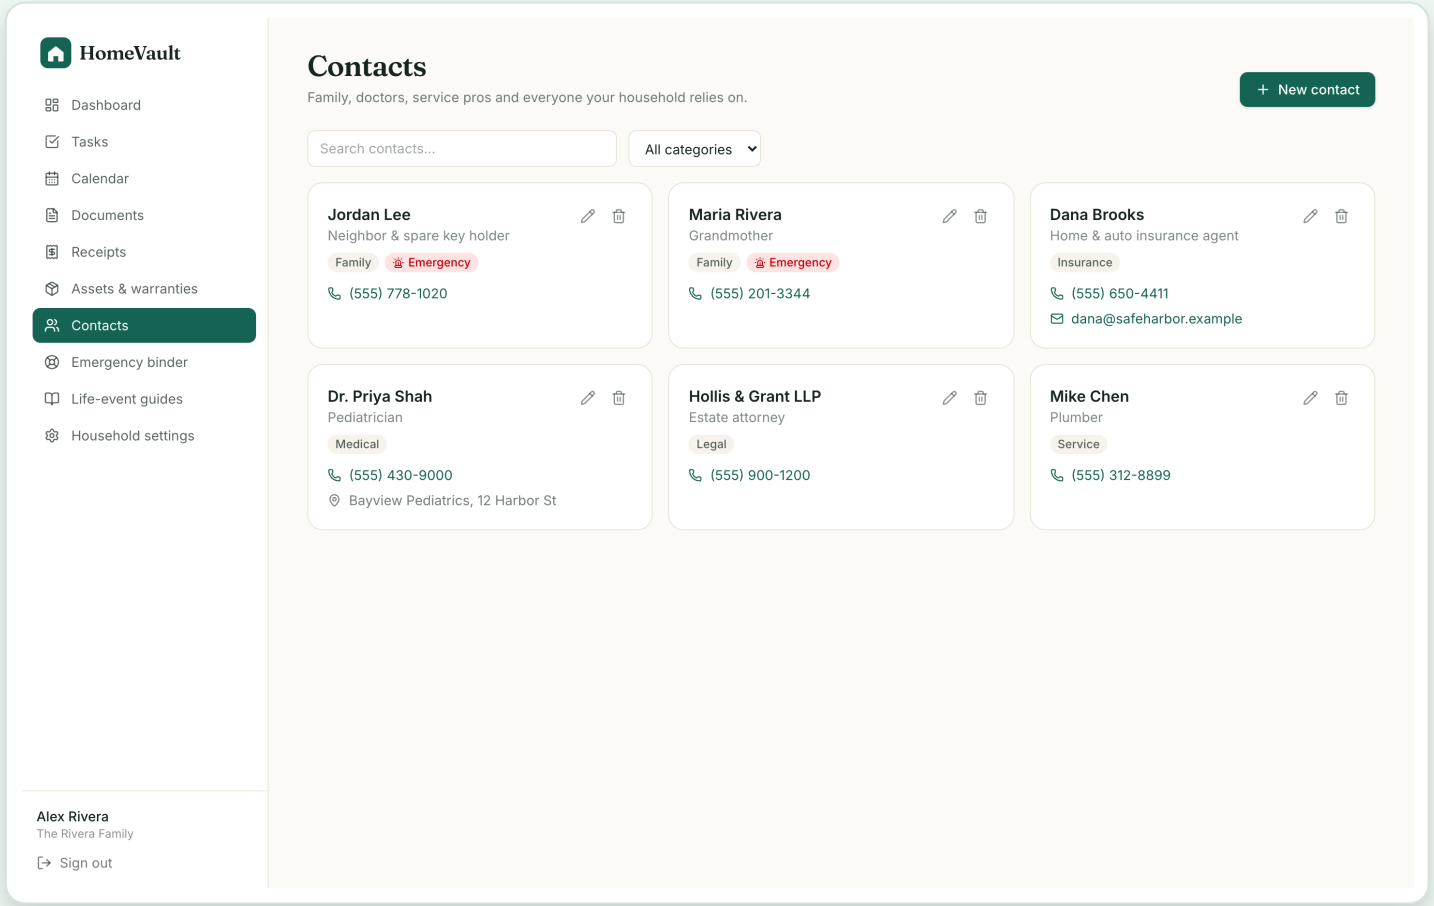

Key features

- Brand, model, serial number / VIN
- Purchase date, price and location
- Warranty status: active, ending, expired
- Total value and active-warranty counts
- Linked back to the original receipt

Under the hood Warranties ending within 60 days raise dashboard alerts.

Contacts

Everyone the household relies on: family, doctors, service pros, insurance and legal.

Key features

- 9 categories with search & filter
- Tap-to-call phone and email links
- Relationship / role and address
- Mark as emergency contact
- Emergency contacts feed the binder

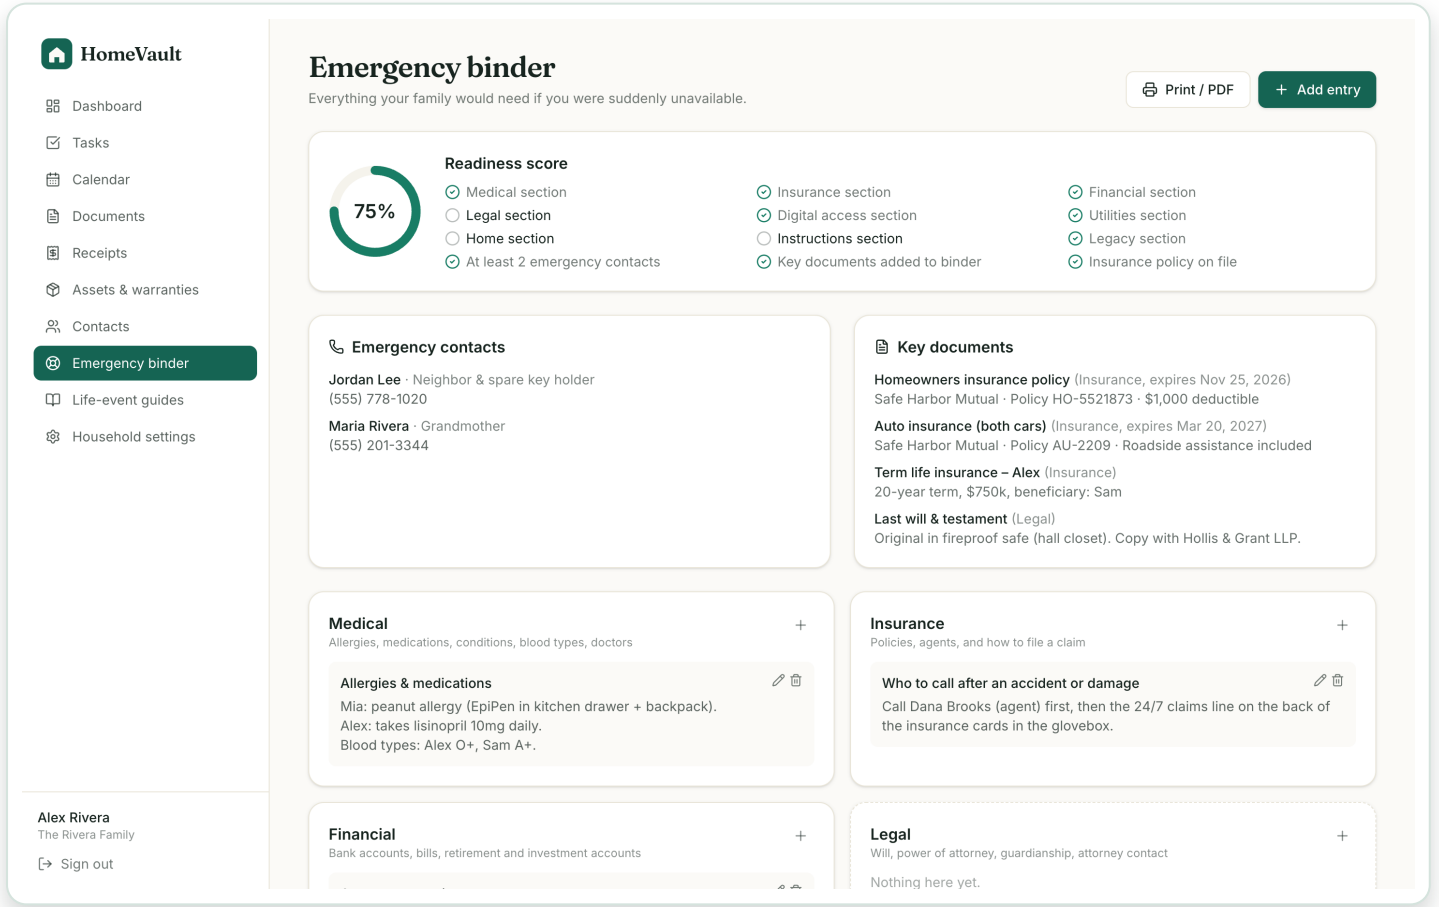

Under the hood Emergency contacts are sorted first and count toward the readiness score.

Emergency binder

Everything the family would need if the household organizer were suddenly unavailable.

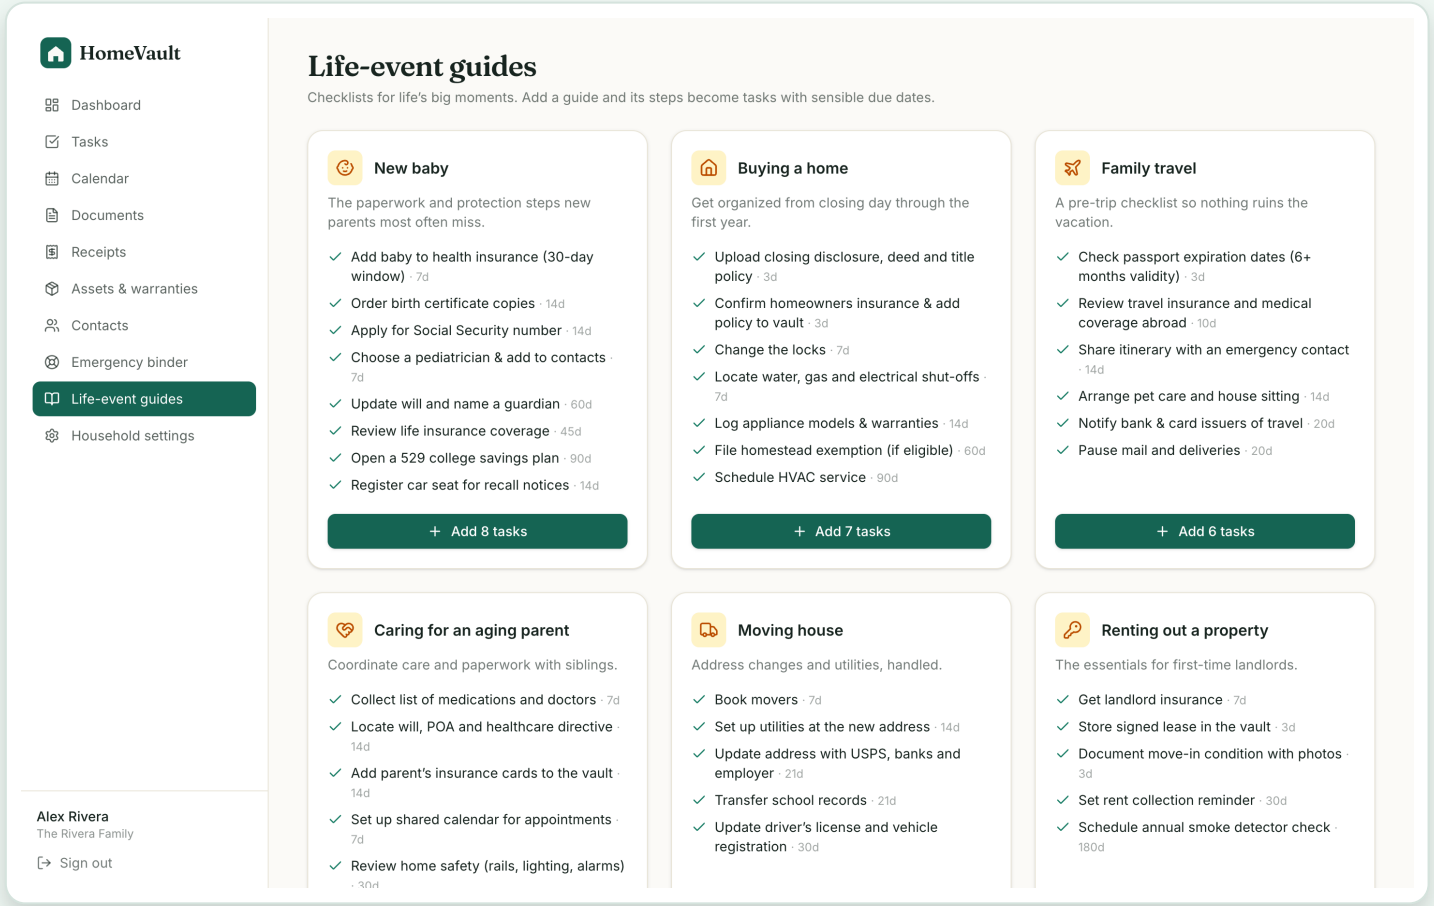

Key features

- 9 sections: medical, insurance, financial, legal…
- Readiness score with a checklist of gaps
- Pulls in emergency contacts & key documents
- Print / save as PDF in one click
- Guidance to store locations, not passwords

Under the hood Score = filled sections + ≥2 emergency contacts + binder documents + insurance on file.

Life-event guides

Ready-made checklists for life's big moments that become real tasks in one click.

Key features

- New baby, buying a home, family travel
- Caring for a parent, moving, renting out
- Each step has a sensible due date
- "Add N tasks" creates them all
- Tasks appear on the calendar & dashboard

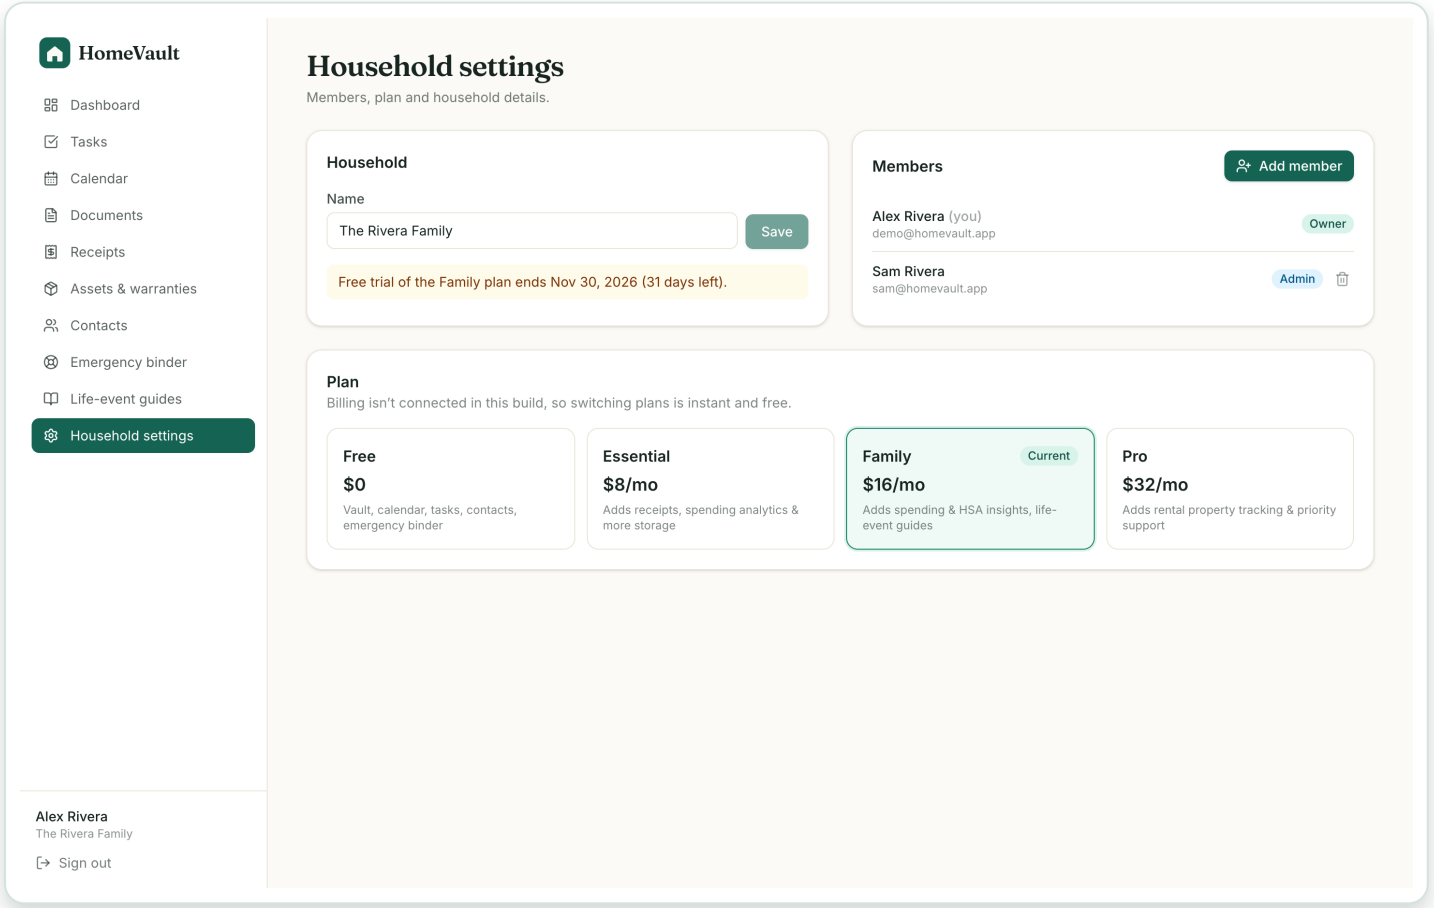

Under the hood Pure front-end content; each step is created through the Tasks API.

Household settings & plans

Manage the household’s name, members and subscription plan.

Key features

- Rename the household
- Add members with a role & temporary password
- Remove members (never the owner)
- Free, Essential, Family and Pro plans
- Trial countdown banner

Under the hood Member management is restricted to Owner/Admin by a server-side guard. Billing is not connected yet.

How the modules feed each other

Purchases → protection

Receipt
TV bought with 12-month warranty

→

Asset
Created with warranty end date

→

Alert
